Due Date: Wednesday, November 4 at 11:59 PM

Your Task: Refactor the existing Express game API by moving all game-related routes, data, and helper functions into a separate router file. The goal is to make your application more modular, organized, and easier to maintain.

I have attached an article titled *Understanding Router in Express.js: A Complete Guide* by Aryan Kumar. Please read the article and use it as a reference while completing this assignment.

IMPORTANT: The file organization and routing techniques you practice in this assignment will help you design and organize the routes for your Exam 2 project.
